Our Projects

1. Trusto-ERP System

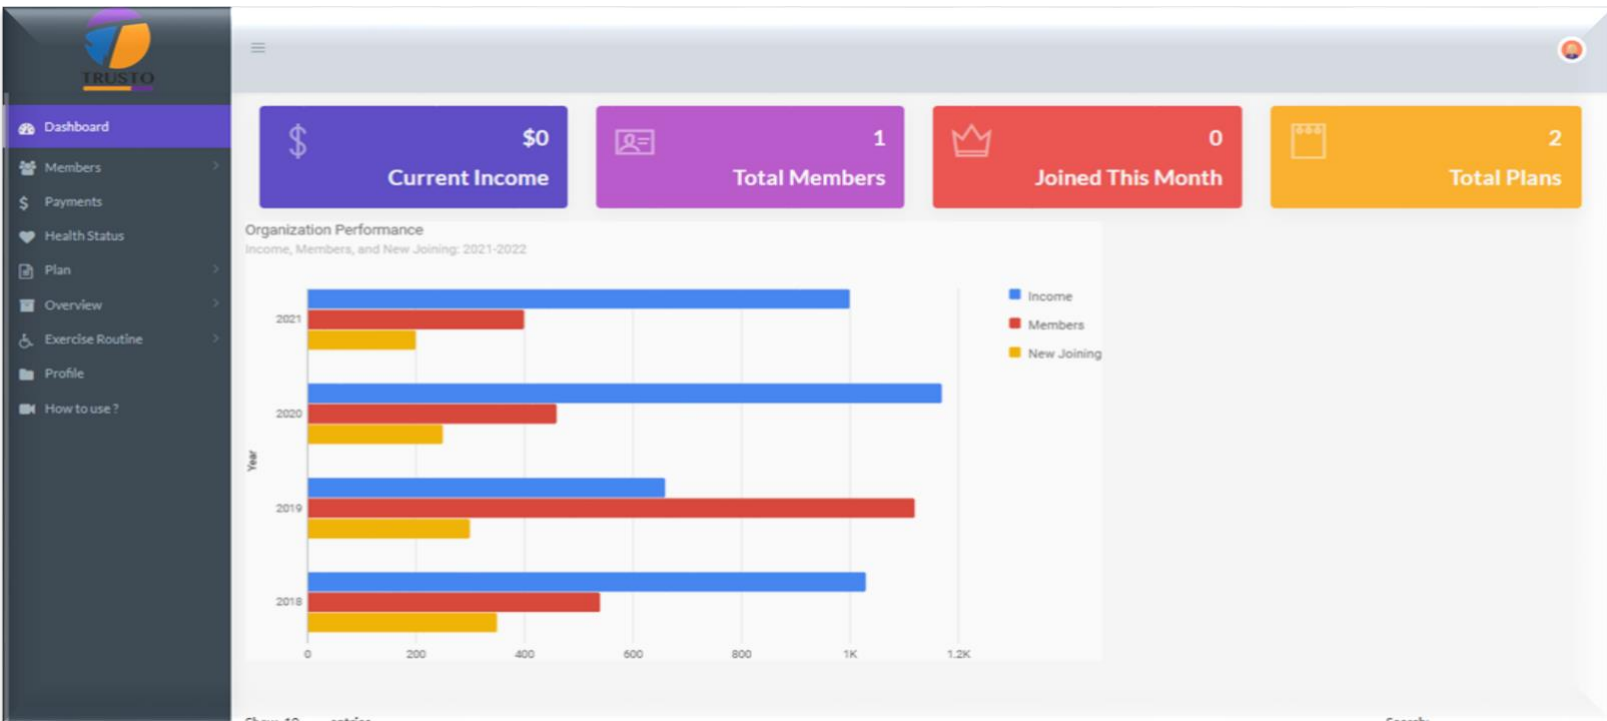

Enterprise resource planning(ERP) software is an important automated solution that business can use to manage production, order processing and inventory.

ERP software also monitors the allocated and use of resources from a comprehensive database management system with built-in analytics.

Supporting applications enable businesses to track information across departments.

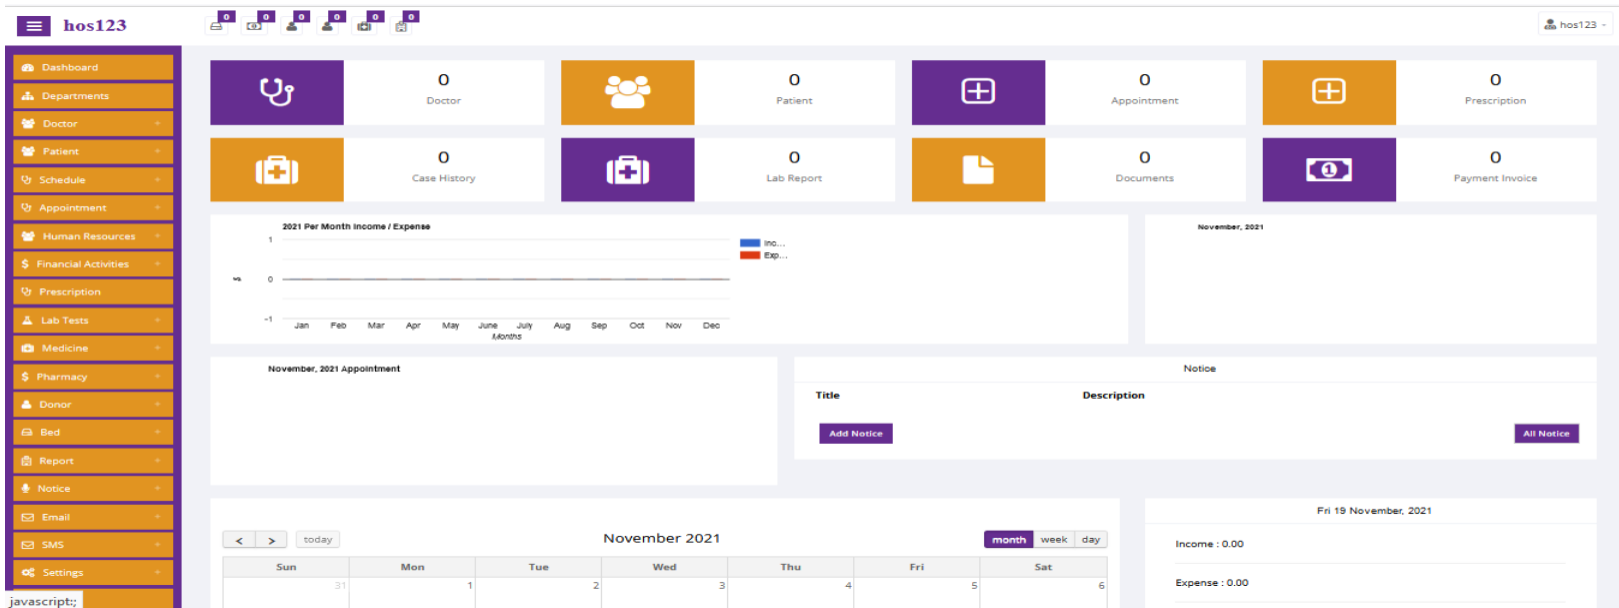

Enterprise Recourse Planning(ERP) is an information system that manages, through integration, planning, purchasing, manufacturing, sales, distribution, accounting, and customer services.

2. GORILLA

Gorilla is Project intended to assist the exercise center with monitoring the everyday exercises which happen in the gym. The primary motivation behind this venture is to computerize an exercise center or a wellness community and all records can be put in gym facility management software. It is an easy-to-understand application. It aides the Gym public to keep up with the track of different things like Members of the gym, Types of equipment in the gym, Facilities, Trainers, gym management software systems, Gym Management systems

3. Phoenix

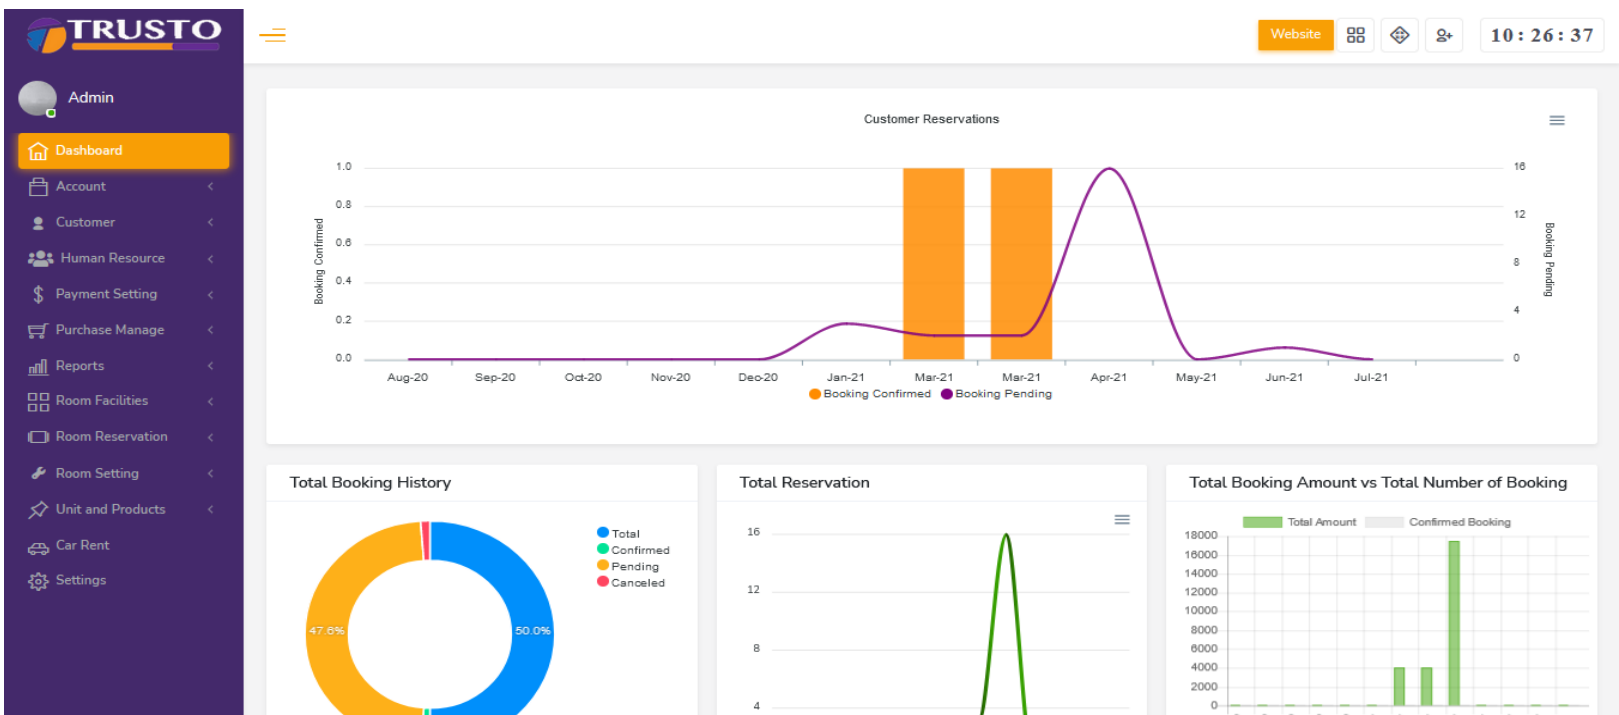

Phoenix, a hospital information management software with an integrated information system design to manage the administrative, financial, and clinical aspects of a hospital.

This encompasses paper-based information processing as well as the data processing system. Managing patient flow effectively is a real-time requirement. We have made this tricky process simple.

Our Phoenix Software gives you user interface in all languages, easy to use by a one-click switch between languages, ideal for managing Hospital Chains all around the world.

Reduces waiting time and enhances patient care by providing staff with accurate and timely patient information. All-in-one hospital or clinic management system that comes with integrated modules such as Appointment, Billing, OPD, , Inventory, Pharmacy, Laboratory, etc. modules.

4. Ant

Our online Hotel Management System(Ant) is a web application. This system developed to automate day to day activity of a Hotel.

It will help you to be more technical competencies such as serving, revenue management, accounting and facilities management. And from the admin panel, an admin user can monitor everything.

5. Delivery System

You can order online.

Orders appear at the delivery man and salesman.

The delivery man will determine if the order was delivered, there was a delay, or the order was not delivered, with the reason being specified

Orders will shows in Delivery Reports

6. Online Class

The screenshot shows a dashboard for an admin user named 'admin admin'. The top navigation bar includes the website name, a 'Visit website' button, and the user's profile. The main dashboard area features a 'Dashboard' title, a navigation sidebar on the left, and four key metrics: 32 Number courses, 187 Number of lessons, 100 Number of enrolment, and 36 Number of student. Below these metrics is a 'COURSE OVERVIEW' section with a large green circular progress indicator, 32 Active courses, and 0 Pending courses.

Metric	Value
Number courses	32
Number of lessons	187
Number of enrolment	100
Number of student	36

Category	Value
Active courses	32
Pending courses	0

Through this addon, the admin can create a bundle of courses and sell the bundle at a new price. Students can subscribe to the bundles and can renew their subscriptions after the validity expiration. Students can access a number of courses at a lower price and the admin can get recurring profit from the course bundles which makes this addon beneficial for both the students and the admin.
